SUMMARY OF 1966 SEASON

[illegible] LIBRARY

MARKET NEWS SERVICE ON FRUITS AND VEGETABLES

PREFACE

This new publication represents a combined summary of Florida, Alabama and North Carolina potato production, shipments, F.O.B. sales and distribution records for the 1966 potato season. Prior to this season separate summaries were prepared by the individual offices covering these crops.

The Federal-State Market News Service began collecting shipping point information and issuing daily market reports for the 1966 potato season at Hastings, Florida April 18, Foley, Alabama May 23 and Elizabeth City, North Carolina June 16. This summary was prepared jointly by the Federal-State Market News Service's offices located at these reporting points.

James O. Gwynn	George D. Cammeyer	James B. Finazzo
Local Representative	Local Representative	Local Representative

REVIEW OF THE 1966 HASTINGS, FLORIDA POTATO SEASON

James O. Gwynn - Local Representative

Weather again was the main factor in this year's potato deal. The crop was delayed about 2 weeks by cold weather the last of January when below freezing temperatures were recorded. Digging began around April 10th in the Bunnell section, this is the early section of the entire Hastings deal.

Yields were very irregular due to the previous cold weather which killed many of the vines and only a part of the acreage killed was replanted due to limited seed stock supplies. Yields ranged from around 50 to around 150 cwt. sacks per acre on the early plantings. After the first plantings were dug, yields began to increase to about normal or slightly above. According to the Crop Reporting Board of the Statistical Reporting Service, U.S. Department of Agriculture, yields generally averaged about 155 cwt. sacks per acre in the Hastings Section.

From the first of May, daily rains occurred throughout the month with the exception of 2 days when no precipitation was recorded. Rainfall averaged from .02 inches to well over 1.00 inches per day as recorded at the Experimental Station just outside of Hastings. The total rainfall recorded was 6.98 inches for the month of May. Surrounding areas received considerable more rain than in Hastings and nearby points. The heavy rains caused many delays in harvesting and serious condition factors for many growers.

Generally there was no rail shortage throughout the entire season, however, due to the condition of the potatoes after the middle of May, many growers started loading trucks in preference to rail cars because of the shorter delivery time with trucks. This increased movement caused a truck shortage throughout the last half of the season.

When the office was opened on April 18th the price was slightly over $5.00 per cwt. for chip potatoes but declined to $4.00 per cwt by April 26. Prices held for about 2 weeks but declined gradually until the first of June when prices were $2.00 per cwt. for chip potatoes. Round Reds generally sold for $4.00 per cwt. for U.S. #1 Size A or Size B potatoes throughout most of the season, however, during the last few days the market declined slightly.

Because of rains during May, many shippers were moving potatoes until the last of June, however, most growers were practically finished by the first of June.

REVIEW OF THE 1966 FOLEY, ALABAMA POTATO SEASON

George D. Cammeyer - Local Representative

The unusually long growing season for south Alabama potatoes this Spring was accurately reflected in the unusually long shipping season. The inclement weather during the growing season was reflected in the irregular quality and maturity of the potatoes.

Marketing of the 1966 Alabama crop was in direct contraat to the previous two seasons when high prices prevailed in all producing areas in the country. During the fall of 1965 prices in all sections declined sharply as a result of increased production. Stocks on hand in January 1966 were considerably higher than the previous year on the same date.

The 1966 late Spring crop, which includes Alabama; Hastings, Florida; Arizona and Kern County, California was estimated at more than 27 million hundred weight, which was 10 percent above the crop of a year ago, and 15 percent above average. The irregular growing season did not adversely affect yields, in fact, most areas had better than average yields,

However, the weather caused the deals to overlap to a greater extent than usual. Hastings, Florida harvesting was still heavy at a time the Alabama crop would normally begin harvesting, and despite the fact that the harvest in Alabama began about 2 weeks late. The Hastings competition was still a big factor in the overall supply situation. Arizona and California started to harvest on schedule. A good healthy demand for potatoes did not develop at all during the Alabama season. The best shipping week of the season this year was the week of June 5 through June 11, when a combined total of 1,011 rail and truck carlots were shipped. In the week of May 29 through June 4 the combined total was 867. The only day on which 200 cars was shipped was June 9, with 103 carlots by truck and 99 cars by rail.

REVIEW OF THE 1966 FOLEY, ALABAMA POTATO SEASON
(Continued)

For comparison in 1965 the peak week was the week of May 30 to June 5, with a total of 982 cars and carlots and the two preceding weeks both showed shipments well above 800 cars. The 1965 season did not have any 200 carlot days - June 2, with 194 was the heaviest loading day of that season. However, days with 175 carlots or more were not uncommon, whereas in the 1966 season they were scarce.

F.O.B prices this year were at their highest early in the season, $2.75-3.00 per hundred weight for Round Red types during the last of May, and mostly around $3.00 for Sebagoes when their harvesting began in June. Sebago prices held fairly steady at $2.50-3.00 throughout the season, but Round Reds dropped to $2.00-2.25 on June 1 and were as low as $1.75 when the Federal-State Market News office closed on June 24. Grower prices were generally about $1.00 per cwt. under the F.O.B. market, with Round Reds reaching a high of 2.00 per cwt and as low as 75¢. Sebago grower prices were mostly from $1.50-2.00. During the season, many shipments were consigned.

Weather conditions for the 1966 harvest were generally good. The greatest problem was finding a place to market the crop.

REVIEW OF THE 1966 ELIZABETH CITY, NORTH CAROLINA POTATO SEASON

James B. Finazzo - Local Representative

The 1966 season was very disappointing to the potato growers in North Carolina. Harvesting overlapped with the Alabama and Hastings, Florida deals creating a marketing problem throughout the season. In addition the heavy rains early in the deal delayed harvesting both in the southern areas around Beaufort and later around the Pasquotank and Camden areas. Also, the early start of the harvest on the Eastern Shore of Virginia and Maryland increased the marketing difficulties for North Carolina potatoes.

Prices reflected a steady decline from the beginning to the end of the season. The earliest F.O.B. price around June 16 was $2.50-2.60 per cwt. for Round White varieties and by July 8 had declined to $1.50 per cwt. Round Reds generally sold for about 25 cents per cwt. higher.

The basis of sales was mostly delivered prices F.O.B. shipping point. Many potatoes grown by small local growers were handled by local brokers. A bright spot of the marketing season was the contract sales, especially early in the season. This type of sale is always important in the North Carolina deal, however, a factual percentage of sales is not available.

The package used primarily for the fresh market trade was the 50 pound burlap sack, with some 10 and 20 pound open window paper sacks. Chip stock was marketed in 100 pound burlap sacks with some bulk loading. Prices were quoted on a cwt. basis.
